

## The EASY-C transversal partition

Reliable

Ergonomic

The transversal partition has become an essential part of multi-temperature transport. **CHEREAU** has developed the Easy-C model to meet modern operating requirements. It is reliable, effective, easy to operate and to maintain. The Easy-C partition has become **THE** reference.

### **Automatic locking in the cab.**

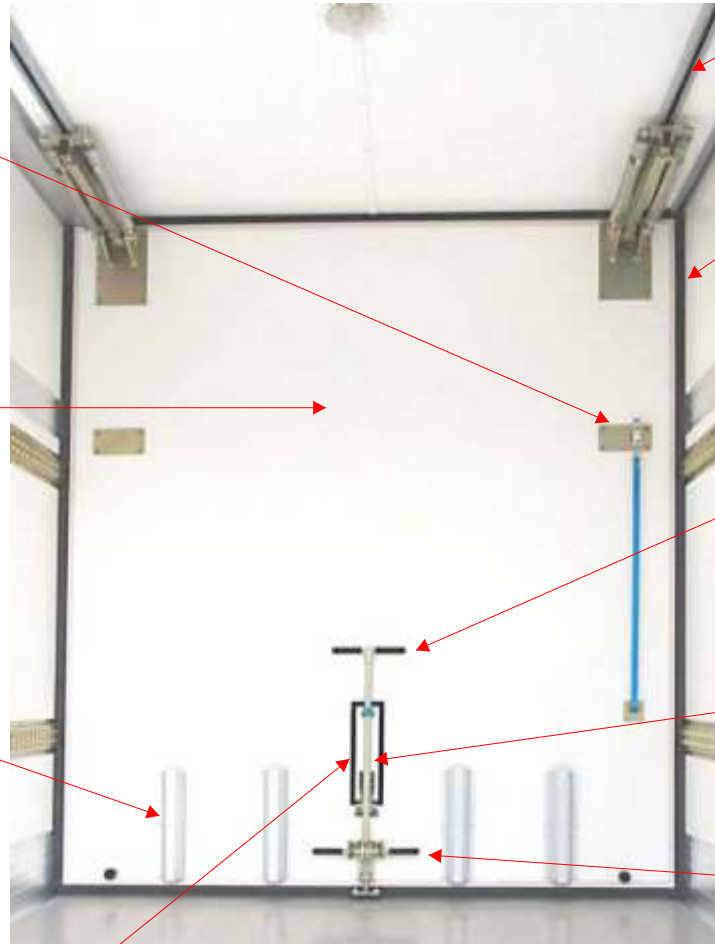

Greater positioning range for the partition in the vehicle.  
Simple maintenance (standard components).

### **Vertical angle strips**

on the extended partition.  
Strips are thicker and wider  
Partition rigidity is enhanced.

### **4 aluminium protectors.**

Handle and partition are both protected, with better air circulation.

**Rails** in a new grade of steel. **Greater strength**

**Seals** that remain flexible at low temperatures.  
Easier to use at low temperatures.

**Plastic handles.**  
**Perfect grip.**  
**More comfortable at low temperatures.**

**Greater section tube**  
**Enhanced impact resistance.**

**Reinforced operating lever** (modified mounting insert).  
**Greater strength.**

**Insulated hatch** with automatic opening (exclusive **CHEREAU** feature).  
**Easier opening and closing of the partition.**

## The EASY-C transversal partition

Reliable

Ergonomic

### **Raising system by spring-loaded cylinders.**

Unaffected by temperature. Guaranteed 50 000 cycles by the manufacturer. Exclusive CHEREAU feature for the French market until 31/12/2006.

**Longitudinal movement** of the partition, facilitated by the transversal guide system.

**Raising system can be retrofitted on operational vehicles** (the ducts have to be removed on vehicles equipped with two or three evaporators). Flexibility and customer satisfaction.

**Safety stop** (interchangeable) for positioning the partition **at 90°**. Lower routine maintenance costs.

### **Well-designed kinematics.**

Less force required to lower the partition.

Force required can be adjusted as a function of the vehicle interior height, interior equipment, etc.

**Adjustable** from 300 to 450 kg using the same ram.

### **Rationalisation**

**Maintenance:** Cylinders easily and quickly replaced, without having to remove the partition.
